

STANDARDS

- Compliant with NIST SP 800-57 Part I for both Sensitive But Unclassified and Classified Data
- Uses FIPS-197 Certified AES 256 and SHA 512 algorithms

SECURITY OFFICER MANAGEMENT FEATURES

- Automatic user identify and password creation
 - Enforces agency password strength and change policies
- Security Server retains a detailed audit trail and chain-of-custody of files encrypted on flash drives
- Dynamic revocation of drive access if drive is lost or stolen
- Master (hidden) password
- Multiple user authentication options
 - Single sign-on when logged onto agency network
 - Federated trust networks
- Automatic encryption

UNIVERSAL FEATURES

- Easy to use drag and drop user Interface
- Encryption software runs from the removable flash drive or hard drive
- No PC Administrative rights are required to encrypt files on the flash/removable drives
- Encrypted files are hidden in an encrypted file system on the removable flash/hard drive
- Integrate file compression provides more storage capacity
- Microsoft Windows Vista, XP (Home & Pro) 2000

ENCRYPTION FOR USB FLASH & REMOVABLE DRIVES

Protect flash drives and removable hard drives from unauthorized access

In today's mobile environment, USB flash drives and USB removable hard drives have become a convenient and valuable tool for government employees to transport and back up large amounts of data. This increases the risk of data exposure since these drives are easily lost or stolen. State and Federal agencies today must protect sensitive information in compliance with local and FISMA standards. SecurFlash™ from encryptX enables government users to enjoy the ease and flexibility of flash drives while adhering to organizational and FISMA data security policies. Centralized Security Officer management features provide the required oversight, administration and audit tracking of protected data on removable drives. Compliance with NIST SP800-57 standards ensures that SecurFlash adheres to government requirements for protection of both Classified and Unclassified data.

About SecurFlash

SecurFlash is powerful data encryption for any brand of USB flash drive and removable hard drive. Over 15 million drives have been shipped with encryptX security software by leading manufacturers including Imation, SanDisk, Ricoh and Iomega. SecurFlash features an intuitive interface and drag and drop file transfer capabilities backed by government-standard, FIPS 197 certified AES encryption. Primary features include:

- **Automatic user identity/password management** – User identities and passwords are created automatically through an interaction with the Security Server (Administrative Console).
- **Master key** – An optional master key can be configured so that Administrators can gain access to the encrypted contents of the flash drive if the employee leaves the company or if an investigation is being conducted.
- **Audit trail** – The Security Server retains an audit trail of user access to the encrypted flash drive and the files on the drive including file based actions taken by users.
- **Dynamic revocation** – if the drive is lost or stolen, the administrator can revoke access to the encrypted drive through a remote command even if a thief has the password.
- **Forced re-authorization intervals** – the Administrator can set policies about how often the user needs to be online when using the drive in order to communicate its audit trail to the Security Server and check for user revocation commands.
- **Single Sign On** – With the Security Server domain authentication feature, users need not enter a username and password to access the flash drive if logged onto their corporate network. When the user is disconnected, user must enter user name and password. Trusted Network domains can also be federated across agency networks and subnets.
- **Automatic drive encryption** – Any data saved to the removable drive through operating system commands (e.g. cut, paste, copy, send to) and applications (e.g. Save As) are automatically encrypted. This feature will be available Summer 2007.

SecurFlash Pricing

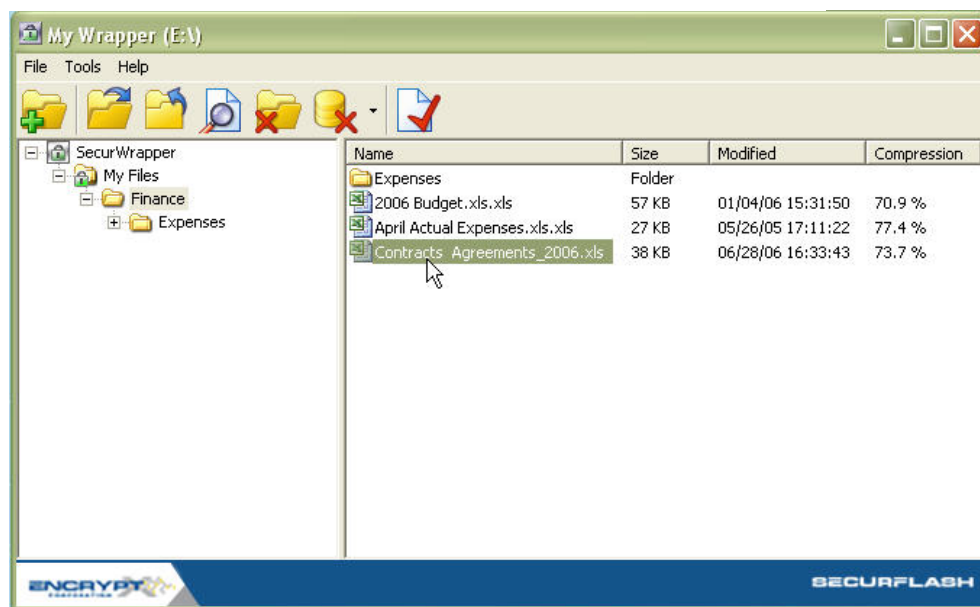

Low Cost of Entry

Pricing for the software runs from \$14.95 for a single drive to as low as \$7.95 for orders of 1000 or more. All licenses are perpetual. The Security Server Management software is \$5000 and is licensed for 1000 users. Each user can have multiple drives.

Drive Manufacturer Bundled Solutions

Numerous drive manufacturer partners bundle encryptX software on their drives. Custom quotes from manufacturing partners that bundle the software are available on request.

SecurFlash Drag and Drop Interface

Mixed Deployments

Agencies can mix and match users and drives in various configurations with some users and drives being centrally managed through the Security Officer Management application and others running independently. No additional software installation on the USB drive or removable hard drive is required to upgrade and connect to the Security Officer central management server.

Individual or low-volume copies of SecurFlash can be affordably purchased online at www.encryptx.com.

ENCRYPTX CORPORATION

Since 2003, encryptX has been providing encryption software for manufacturer-specific flash drives, government agencies and corporations.

Founded in 1999 by industry experts in data security and storage, encryptX provides comprehensive security software solutions that provide persistent protection of data.

encryptX solutions are registered with the US Department of Commerce and other agencies and are approved for export in compliance with US government regulations.

encryptX is privately held and is wholly owned by BeCompliant Corporation.

Trusted by Millions

- Over 15 million drives shipped with encryptX software by manufacturers including: Imation, SanDisk, Iomega, Olixir, Hana Micron and others
- Government users include: States of New York, Montana, Virginia, Georgia, City of Richmond, Virginia, London Borough of Hackney (site of 2012 Olympics), Vancouver Police Department, and many others
- Corporate users include: IBM Corporation, Sungard Data Systems, Vanguard Mutual Funds, Boeing, General Dynamics, Omnicare Pharmaceutical, New Alliance Bank, and many others
